

Armanni® Connect 4.0

Armanni® Connect is the new tool for a digitalized and efficient management of Armanni lift trucks, thanks to which you can have a real-time monitoring both on the single truck and on the whole company fleet.

This tool makes Armanni products “4.0 Ready”, thus allowing to improve the management of the machine park, to increase the safety of the operators and to boost the efficiency and the productivity of the machines.

The main advantages

Greater safety for the operators

“Smart” management of the lift truck

Economic saving on maintenance costs

Increased efficiency and productivity

How does it work?

Advanced connectivity

Data accessibility via Smartphone, Tablet or PC thanks to the integrated WIFI and GPRS system.

Black box

It records the bumps committed by each operator, the holes, the actual hours of use, the battery status, errors and anomalies.

Locationing

Real time truck tracking through the designated GPS system.

Service Alerts

It notifies the scheduled maintenance deadlines pre-set by the fleet supervisor.

Datalogger

It analyses the driving style of the operators by providing data on the use of the vehicle by each operator.

Pre-operative checklist

It allows to request a check on the truck's conditions before each use by the operator.

Access control

It guarantees access only to authorized users with an identification RFID badge.
